➤ Name of Department: CIVIL ENGINEERING

➤ Name of Students Club.: **ECO CLUB**

Objectives:

AGPIT ECO Club had evolved from an environmental project initially undertaken by a group of engineering students. The club realized that all environmental and social issues are interconnected, and do not exist in isolation. Thus, it was decided to transform the club with a view to increase its scope by working on social issues as well. In the year 2019, the ECO Club was transformed into as the socio-environmental Organization club of AGPIT.

The club aims at sensitizing students about various social and environmental issues and enhancing their knowledge regarding the same. The club conducts various activities like lectures and seminars by intellectuals and activists, documentary screenings, classic film screenings, discussions, street plays, awareness campaigns, tree plantation, poetry recitation, etc. ECO Club members meet every Saturday at 12 pm in Civil Engg. Department. The club is open to all, runs democratically and disregards any hierarchical structure for its functioning.
